* Hectares and AAC are rounded to the nearest 10,000, except for FSC data which is taken directly from the FSC web-site. AAC (annual allowable cut) is not reported for all areas and is influenced by many factors, including the age distribution of the forest and the salvage of wood damaged by insects and diseases, and can vary from year to year within a given time.

** If a forest area has been certified to more than one of the three Sustainable Forest Management (CSA, FSC, SFI) standard, the area is only counted once, hence the total of certifications for SFM standards may be less than the sum of the individual totals for CSA, FSC and SFI). AAC Total is not accurate as AAC is not reported for all areas.
